Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Vinyl Chloride (40 CFR Part 61, Subpart F) apply to new and existing plants that produce: ethylene dichloride (EDC) by reaction of oxygen and hydrogen chloride with ethylene; vinyl chloride (VC) by any process; and one or more polymers containing any fraction of polymerized VC. This Subpart does not apply to equipment used in research and development if the reactor used to polymerize the VC has a capacity of no more than 0.19 m³. New facilities include those that commenced construction or reconstruction after the date of proposal. In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance with 40 CFR Part 61, Subpart F.

Form Numbers: None.

Respondents/affected entities: Ethylene dichloride, polyvinyl chloride and vinyl chloride plants.

Respondent's obligation to respond: Mandatory (40 CFR Part 61, Subpart F).

Estimated number of respondents: 16 (total).

Frequency of response: Initially, quarterly and occasionally.

Total estimated burden: 6,540 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$1,410,000 (per year), which includes \$720,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is an adjustment decrease in the estimated respondent burden and costs as currently identified in the OMB Inventory of Approved Burdens. This is not due to any program changes. The change has occurred due to a decrease in the number of respondents complying with this rule. Based on the Agency's consultation with the Vinyl Institute, the number of sources has decreased from an average of 18 sources in the previous ICR to an average of 16 sources for the current ICR period.
